

# BRING YOUR WASH PLANT INTO THE 21<sup>ST</sup> CENTURY

## MARK VI<sup>®</sup> CONTROL SYSTEM

Are your plant operators turning knobs to keep your product in-spec? Why not let a computer do the calculations for you? The Mark VI<sup>®</sup> Control System is the ultimate in Sand Reblending Systems. The Mark VI<sup>®</sup> does all the thinking to keep your product within the specification, even when the feed changes! It has been designed by Eagle engineers who understand your needs and help you maximize your productivity.

## FEATURES

### Enhanced Tank Configuration

- Runs single or multiple tanks
- 6-11 stations per tank
- 2-4 valves per station

### Touch Screen Interface

- Intuitive commands
- All needed information readily visible

### Real Time Valve Status Indicators

### Manual Valve Dump

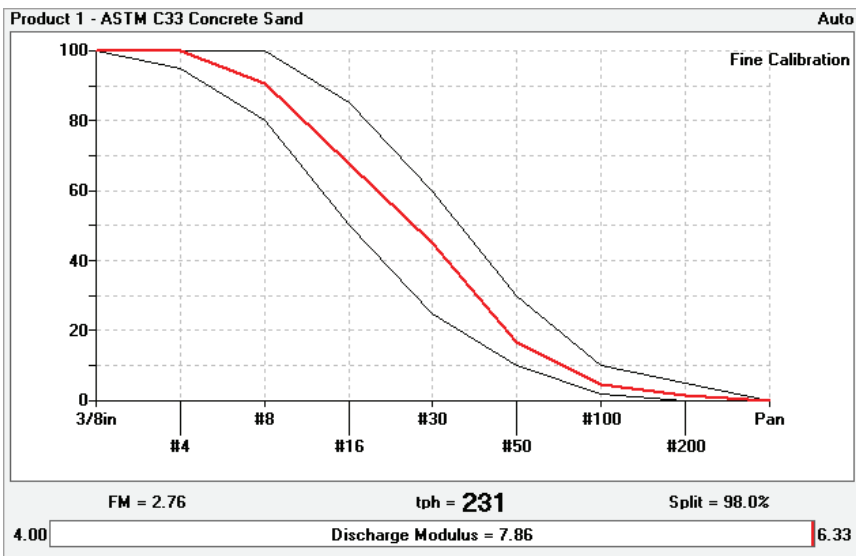

- Simply tap the valve to open it

### Stockpile Calibration

- Improves Accuracy
- Simplifies Calibration Process

### Adapts To Changing Feed Options

- Hydraulic Pressure/Level
- Specific Gravity Sensor
- Remote Monitoring

The touchscreen display constantly updates to show you your in-spec product as it hits the stockpile.
